

Project Feedback

July 10th, 2021 Hackathon

Michael Lee, Greg Slowski, Hamza Luqman, & Bhavyai Gupta

technically above requirements, multiple extra features.

GUI, scaleable, exception handling

nice UML, pretty intuitive

good presentation

Good doc strings

Flexible Miner implementation with pull

GUI front end, looks very good.

Re-Reads same files on each analyze call, a bit slow?

Great UML

Code walk through was a bit hard to follow in presentation.

Handles invalid input

Clear output, lots of detail

Good demonstration of multiple cases

UML is pretty uni-directional- could anything be better encapsulated?

Suggest showing demo before explaining code in detail during presentation

Exceptional work and great final product!
